Claims 1-21 are pending.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13 and 20, drawn to a single pivotal valve element, classified in class 137, subclass 521 or 527.
- II. Claims 14-19 and 21, drawn to an integral resilient member forming plural valves dividing and recombining fluid flow , classified in class 137, subclass 512.15.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of being used together and the invention of Group II, in which fluid is divided and recombined thus forming plural parallel flow paths, functions differently than the invention of Group I which forms a single flow path that is either operable in response to fluid pressure or an independent (manual) operator.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter and that the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Should applicant elect Group I above, then this application will contain claims directed to the following patentably distinct species of the claimed invention:

- A) The species illustrated in Figs. 1-3.
- B) The species illustrated in Figs. 4-6.
- C) The species illustrated in Figs. 7-8.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 4-9, 12, 13 and 20 appear to be generic to the invention of Group I.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 3753

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
